CompTIA CySA+ • Security+ • Network+ • A+ • ISC2 CC • B.B.A. Management Information Systems

---

## PROFESSIONAL SUMMARY

---

IT Systems and Cybersecurity professional with 8+ years of experience supporting enterprise infrastructure, administering identity and access management, performing security monitoring and incident response, and maintaining compliance in HIPAA-regulated healthcare environments. Demonstrated expertise in Active Directory administration, endpoint security and compliance, account lifecycle management, knowledge article development, software deployment, and technical troubleshooting across multi-site environments. Holds CompTIA CySA+, Security+, Network+, A+, and ISC2 Certified in Cybersecurity. B.B.A. in Management Information Systems, University of Memphis, May 2026. Seeking roles in IT security, systems administration, infrastructure administration, or IT operations.

## CORE COMPETENCIES

---

**Cybersecurity:** Threat detection, security incident response, phishing identification and interception, endpoint security configuration, BitLocker encryption enforcement, BIOS/UEFI lockdown, HIPAA data protection compliance, security awareness communication

**Identity and Access Management:** Active Directory provisioning and deprovisioning, mailbox assignment, security group and distribution group administration, RBAC enforcement, MFA administration, least privilege access, account lifecycle management, access form verification

**Endpoint Management:** Microsoft Intune, Cisco Meraki MDM, Trend Micro endpoint configuration, BitLocker compliance verification, hardware imaging and deployment, software deployment via KACE Management Console, endpoint compliance verification, device lifecycle management

**Systems Administration:** Windows Server, DNS, DHCP, system performance monitoring, EHR data backup and migration support, knowledge article development, technical documentation

**Networking:** TCP/IP, VPN configuration and access management, LAN/WAN troubleshooting, wireless networking, remote access configuration, NSLookup, Nmap, network issue identification and escalation

**SaaS and Platforms:** Microsoft 365, Exchange Online, SharePoint, Teams, Azure Active Directory, KACE Management Console, Cherwell ITSM, GlobalProtect VPN

**Documentation:** Knowledge article development, technical documentation, incident documentation, asset inventory management, access form administration

**Hardware and Field Support:** Workstation deployment and configuration, printer and peripheral support, hardware troubleshooting, multi-site field support, asset tracking

## PROFESSIONAL EXPERIENCE

---

**IT Technician and Service Desk Specialist** | **Shelby County Government** | Memphis, TN | Apr 2024 - May 2026

*Official title of record: Customer Support Technician II*

- Administered Active Directory for 5,000+ users across a government enterprise environment, managing account provisioning and deprovisioning, mailbox assignments, distribution group and security group membership, and access control in compliance with organizational policy.
- Verified completion of computer access forms, Acceptable Use Policy acknowledgments, and VPN access forms as part of the account onboarding process, ensuring users were granted appropriate access before system activation.
- Monitored endpoint security clients and host-based intrusion detection systems, identifying indicators of compromise including anomalous process behavior, unusual network activity, and after-hours access patterns, and escalating incidents through established response protocols.
- Identified and intercepted a live phishing simulation mid-execution without prior knowledge it was a test, issuing an organization-wide alert that stopped further credential submission and resulting in mandatory security awareness training for 12 affected users.
- Diagnosed a Tyler Technologies database connectivity failure using NSLookup and log analysis, identifying an ISP node failure and predicting a county-wide network outage before it occurred the following morning.

- Enforced MFA across the enterprise environment, responding to account compromise events, notifying affected users, and coordinating endpoint isolation and remediation with the security team.
- Developed knowledge articles documenting resolution procedures for recurring technical issues, supporting consistent service delivery and onboarding of new team members.
- Communicated with vendors to report software failures, obtain update documentation, and escalate incidents where vendor instructions were incomplete or missing, including a critical instance where a vendor-recommended update broke a department application with no documented recovery path.

#### **IT Field Technician | eResources, LLC | Memphis, TN | Apr 2023 - Aug 2023**

- Provided on-site and remote IT support across multiple client environments including healthcare, legal, and business organizations, administering Active Directory accounts, network configurations, and software deployments.
- Performed hands-on hardware troubleshooting and system restoration including a Windows Server reboot and static IP reconfiguration following a power outage at a remote Mississippi client facility, restoring full printing and device connectivity.
- Diagnosed an undocumented database connectivity failure for a county housing department using NSLookup and Nmap to locate an unregistered local server, resolving an issue the vendor had no documentation or recovery path for.
- Maintained technical documentation of system configurations, service activities, and resolution procedures for client records.

#### **IT Technician | Alliance Healthcare Services | Memphis, TN | Nov 2018 - Apr 2023**

- Served as the primary IT technician across multiple HIPAA-regulated psychiatric clinic locations in Memphis, responsible for endpoint security compliance, account administration, hardware deployment, and infrastructure support for clinical and administrative staff.
- Administered Active Directory account lifecycle including provisioning, security group assignments, mailbox configuration, and same-day deprovisioning upon separation, enforcing least privilege access by granting only what each role explicitly required with supervisor or manager authorization for any elevated permissions.
- Enforced endpoint security compliance across all clinical devices including BitLocker encryption verification, BIOS/UEFI lockdown, Cisco Meraki MDM enrollment, and Trend Micro installation and configuration verification including heuristics settings, backup logs, program locks, and update status.
- Administered mobile device management through Cisco Meraki and later Microsoft Intune, managing device enrollment, compliance policies, and MFA authentication controls across clinical and administrative endpoints.
- Performed EHR data backup for a newly merged clinic transitioning from a legacy EHR system to Baptist Memorial Healthcare's platform, preserving patient health records that could not be directly migrated due to incompatible database formats, ensuring HIPAA-compliant data retention during the transition.
- Deployed software across endpoints using manual installation and configuration for environment-specific requirements, maintaining version consistency and compatibility across clinic locations.
- Supported a platform migration from Cisco Meraki to Microsoft Intune, coordinating with vendors, testing device configurations, and documenting the migration process.
- Maintained HIPAA compliance documentation, asset inventory records, and technical documentation supporting regulatory governance and operational continuity.

## **EDUCATION**

---

**B.B.A., Management Information Systems** | University of Memphis, Memphis, TN | Conferred May 2026

**A.S., General Studies - Information Systems** | Southwest Tennessee Community College, Memphis, TN

## **CERTIFICATIONS**

---

CompTIA CySA+ (CS0-003) • CompTIA Security+ (SY0-701) • CompTIA Network+ (N10-008) • CompTIA A+ • ISC2 Certified in Cybersecurity (CC)

## **ADDITIONAL**

---

Presented university-level security research on 802.11 management frame vulnerabilities and wireless deauthentication attack methodology using Kali Linux and Aircrack-ng at Utah State University.
